

Bank safe box & steel deposit box & staff locker producing solution

1, Bank safe deposit box

The bank safe deposit box business is a kind of financial security service provided by financial institutions such as banks. It started in the 17th century in the United Kingdom. It not only protects personal belongings from loss but also strictly protects personal privacy. It has become an ordinary resident. Smart choice.

2, Mild steel staff locker

The storage cabinet is a name that allows users to store self-service items. It is also a name for automatic storage cabinets and automatic storage cabinets. It was originally produced in Japan and later widely used in Taiwan. It began to appear in mainland China in 1999 and gradually became widespread. Application. At present, it is mainly divided into two series: mechanical type and computer type.

2, How to making these deposit box and locker

Small workshop choose bending machine, but big mass production manufacturer would like to adopt roll forming

machine. PLC control system, engineer just handle the touch screen to operation roll forming process.

Automatic box production line process,

Uncoiler → Guide device → Straightener → Servo Feeder →

Hydraulic Punch → Roll forming machine system → Hydraulic

Punch → Shear → Collect Frame.

A, Uncoiler for opening strip coil

B, Straightener for flattening the strip with guide device

C, Hydraulic punch for big hole

E, Gap punch, shear tool, box frame product finished

By the way, Electric box process same with deposit box production, but roll forming machine more big, and PLC more complex, if you want to producing the eletric cabinet box please visit in
